ARCADIAN-IoT

VISION & STRATEGY

The ARCADIAN-IoT project aims to develop and make available an innovative, advanced, solid framework for trust, security and privacy management for IoT systems, by considering all the entities interacting with such systems, including persons, IoT devices (objects), and respective applications/services.

The ARCADIAN-IoT framework will accelerate the development of IoT systems towards decentralized, transparent and user controllable privacy in three real use cases:

Emergency and vigilance
using drones and IoT

Monitoring of grid
infrastructure

Medical IoT devices for tele-
monitoring and follow-up of
cancer patients

Funded by the EU's Horizon2020 programme
under agreement n° 101020259
